A Note about Risk: The value of investments in equity securities will fluctuate in response to general economic conditions and to changes in the prospects of particular companies, including market, liquidity, currency, and political risks. Small cap company stocks tend to be more volatile and may be less liquid than other types of stocks. Small cap companies may also have more limited product lines, markets, or financial resources and typically experience a higher risk of failure than large cap companies. Investments in growth companies can be more sensitive to the company's earnings and more volatile than the stock market in general. The Fund engages in active and frequent trading of its securities, which may result in increased transaction fees, reduced investment performance, and higher taxes. These factors can adversely affect Fund performance.
