

Alger® Mid Cap Growth Portfolio I-2

Alger® Mid Cap Growth Portfolio

This fund is only available in the Personal Retirement Planner Deferred Variable Annuity.
Information as of 03/31/2025

Description:

This portfolio primarily invests in growth/equity securities of U.S. mid cap companies identified through Alger fundamental research as demonstrating promising growth potential. Seeks long-term capital appreciation. Horace Mann believes this is an aggressive investment.

Risk Disclosure -

Investing in the stock market involves risks, including the potential loss of principal. Growth stocks may be more volatile than other stocks as their prices tend to be higher in relation to their companies' earnings and may be more sensitive to market, political, and economic developments. A significant portion of assets may be invested in securities of companies in related sectors, and may be similarly affected by economic, political, or market events and conditions and may be more vulnerable to unfavorable sector developments. Investing in companies of medium capitalizations involve the risk that such issuers may have limited product lines or financial resources, lack management depth, or have limited liquidity. Foreign securities involve special risks including currency fluctuations, inefficient trading, political and economic instability, and increased volatility. Active trading may increase transaction costs, brokerage commissions, and taxes, which can lower the return on investment. At times, the Portfolio may hold a large cash position, which may underperform relative to equity securities. Alger pays compensation to third party marketers to sell various strategies to prospective investors. Sector allocation are inclusive of cash but cash is not displayed in the chart. Top holdings are inclusive of cash but cash is not displayed as a top holding.

FFS-00132 (03/25)

Beta: 1.03 (5 Years)

Beta definition:

Beta provides a measure of a stock or fund's volatility relative to the market. The market is often defined by a certain benchmark, index or market average. The market's beta is 1. If a stock or fund is more volatile than the market, its beta will be higher than 1. If it is less volatile, the beta will be below 1. An investment that has a beta of 1.25 is believed to be more volatile than its market benchmark. For example, if the benchmark dropped 1 percent, then an investment with a beta of 1.25 is predicted to drop 1.25 percent. Remember, investment returns and principal value will fluctuate, so the value of your account, when redeemed, may be more or less than your original cost.
